AXCELIS - IMPLANTER PARTS NV10 SERIES

Signet Improvement for the Eaton NV10 Series Implanters

This Signet improved design allows both Electrodes to be replaced while the OEM's plate allows only the Low Energy Electrode to be replaced.

Signet introduces two new parts, a new and improved Extraction Electrode Plate replacement for Eaton's NV10 OEM part # 17062350 and a replaceable High Energy Electrode. Now the convenience and economy of replacing the Low Energy Extraction Electrode is also available for the High Energy Electrode with Signet's # 40-2350 Extraction Electrode Plate and Signet's # 44-2340 High Energy Electrode.

Signet Part #	OEM Part #	Description
40-2350	17062350 Ref.	Extraction Electrode Plate
40-0001	N/A	Low Energy Electrode
44-2340	17062340	High Energy Electrode

Ref. = Design Alteration of OEM Part
